Visual Information Systems

Visual Information Systems from Mitsubishi are high-tech products with outstanding image quality that make the view and perception of pictures into an intensive visual experience.

However, apart from the purely technical performance data, characteristics, quality and reliability of our products, our prime objective is to develop new technologies and to harmonize these with the constantly changing requirements and demands that are made by the consumer.

From our visions, from the power and determination to implement these without deviation, we obtain our comprehensive, continuously growing expertise. That is why Mitsubishi Electric is one of the leading companies worldwide since years where Visual Information Systems are concerned.

Mitsubishi Electric Europe, founded in 1978, is a subsidiary of the Japanese Mitsubishi Electric Corporation and acts as head office for Europe. As from April 1980, (Benelux Office), established in Mijdrecht (the Netherlands), takes care of import and distribution in the Benelux and the export to a large number of European countries of electrical and electronic equipment for the use of both consumers as well as industry. The supply programme includes: Videoprinters, Photoprinters, Digital Photosystems, Security Products, Display Wall Cubes and Multimedia Projectors for business applications and home use.
