

# CLEAN WATER FOR A PURE ENVIRONMENT!

Degussa is a multinational corporation consistently aligned to the specialty chemistry.

In fiscal 2003 its 47,000 employees generated sales of 11,4 billion, making it Germany's third largest chemical company and the global market leader in specialty chemicals. Innovative products and system solutions enable Degussa to play a valuable and indispensable role in the success of its customers, as summed up by our claim "creating essentials".

The business line Water Chemicals, based in Krefeld, Germany, belongs to Degussa's Performance Materials division.

The Water Chemicals business line specializes in the production and service of polymer flocculation

aids for the efficient separation of solids from liquids. They improve waste water treatment in clarification plants and also play a valuable role in the clarification of raw water for use as process water or drinking water. The flocculants as well as other products in our range can also optimize process and circulation of water in paper production, mining, sugar and other chemical industries.

The products are manufactured for the global market in Krefeld/Germany; Perm/Russia; Greensboro/North Carolina, USA; Americana/Brazil and Beijing/China.
